

The Answer to your Feeding Problems

At Rowen Barbary we work hard to ensure the health and well being of your horse or pony and through talking with horse owners we have noticed the reoccurring problem that is often faced with horses and ponies that have a starch and sugar intolerance but who still require condition.

From this we have developed Solution Mash. Solution Mash has evolved from the popular Soft 'n' Soak Range of feeds and is developed for horses that require a higher calorie diet for conditioning and controlled weight gain whilst being ideal for those that suffer from starch and sugar intolerance.

With no cereals and a very low starch and sugar content (under 1% total sugar) it is suitable for feeding to horses and ponies that suffer from Laminitis, Cushings, Insulin Resistance and EPSM. The high levels of oils provide an excellent source of slow release energy whilst helping horses to achieve the required body condition and perfecting a great coat bloom.

With a high fibre content Solution Mash helps to encourage slow rates of digestion throughout the hind gut and is particularly valuable for horses requiring a diet that is sympathetic on the digestive system, being extremely palatable for horses that struggle to chew and digest traditional concentrates. Yeasacc 1026 is also added for optimum fibre and mineral digestion.

Super high levels of Vitamin E are included helping support the immune system and maintain healthy antioxidant levels as well as additional Lysine and Methionine for optimal protein balance and protected Bioplex Selenium, Zinc and Copper for improved availability.

Natural herbs Spearmint, Garlic and Fenugreek are also included to help improve appetite.
